

Welding manipulators & Rotators | Rotators

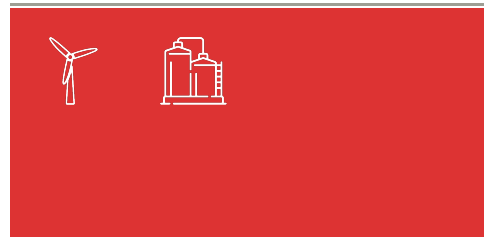

AAR - Rotator

AAR - Auto-aligning rotators

The self-aligning roller positioners of the **AAR / MB series** are particularly ideal for positioning and rotating cylindrical elements of various diameters and ensuring **automatic alignment**. The wheels, in fact, are mounted on balancing platforms that allow constant adjustment and provide an adequate and stable platform. Normally consisting of a motorized unit and a free-running unit, these positioners are equipped with a motorized base. The **rotation speed is variable** and these units can be **synchronized with welding devices** such as Column & Boom manipulators. On request, these units can also be made specifically for use in painting and sandblasting booths and can be equipped with a hydraulic adaptation system.

Sectors

	AAR
FIT-UP VERSION	Available
TYPE OF BASE	Fixed or motorized
TYPE OF ALIGNMENT	Automatic
LOAD CAPACITY	From 10 to 120 Tons

Type of profile

Accessories & Torches
