

Welding manipulators & Rotators | Rotators

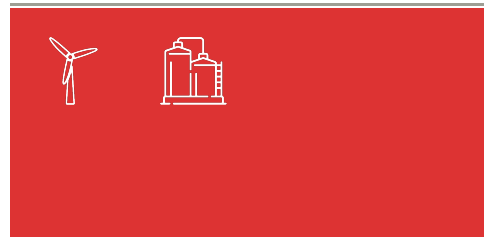

MAR - Rotator

MAR - Manual-aligning rotator

The **MAR series** conventional rotators positioners are the most economical and flexible units, ideal for a variety of different applications. These units allow rotation and positioning of cylindrical items and are capable of handling a wide range of different diameters due to the fact that the distance between the rolls is adjustable. Normally made up of a motorized unit followed by a free-running one, they can be equipped with both a fixed base and a trolley base for variable speed freewheel movement on rails and can be **synchronized with welding devices** such as Column & Boom manipulators. On request, these units can also be made specifically for use in painting and sandblasting booths and can be equipped with a hydraulic adaptation system.

Sectors

	MAR
FIT-UP VERSION	Available
TYPE OF BASE	Fixed or motorized
TYPE OF ALIGNMENT	Manual
LOAD CAPACITY	From 10 to 120 Tons

Type of profiles

Accessories & Torches
